ABOUT

Newly graduated in Computer Science with a solid foundation in software engineering. I love tackling challenges through technology and science and am excited to explore roles that value curiosity and innovation.

SKILLS

Programming: C#, Python, Java, React, Flutter, Javascript, Julia, Electron, Swift, Lua

Data: SQL, Oracle ADB, Firebase, Postgres, PowerBI, Excel, Tensorflow, PyTorch, Pandas, Numpy

Miscellaneous: Git, Jira, Azure DevOps, Arduino/ESP32, LaTeX, Agile, Bloomberg Terminal

EDUCATION

University of Montreal

B.Sc. in Computer Sciences

Montreal, QC

2023 - 2025

University of Montreal

Certificate in Applied Computer Sciences

Montreal, QC

2022 - 2023

WORK EXPERIENCE

Desjardins General Insurance Group

Data Engineer

Montreal, QC

Apr 2025 - Present

- Evolved the company's Denodo data virtualization platform by extending data models, ensuring robust support for the analytical requirements of both auto and home insurance solutions.
- Performed critical data extractions on our Hive Database, enabling Business Intelligence teams to access accurate and timely datasets for reporting and analysis.
- Provided operational support during off-hours migration periods, ensuring business continuity and rapid resolution of critical production issues.

Desjardins Global Asset Management

Software Engineer Intern - .NET/SQL

Montreal, QC

Sept 2024 - Apr 2025

- Creation and improvement of tools and alerts to assist portfolio managers, compliance team and data loading team.
- Participated in the migration of mission-critical applications to .NET 8, refactoring legacy code and implementing a shared library to enhance scalability and maintainability and much more.
- Engineered a robust file transfer system by replacing legacy SFTP polling with an on-demand architecture, improving reliability and reducing file server load by 80%

LXT AI

QA Data Entry Lead

Montreal, QC

Feb 2022 - Sept 2023

- Oversaw a team in mass data entry for training large language models, ensuring data quality.
- Developed and implemented tools and trainings that reduced error rates by 20% and resulted in improved efficiency and accuracy.

AEDIROUM (Student Association)

Deputy Internal VP + Graduating Students Representative

Montreal, QC

Sept 2023 - Sept 2024

Engaged in my student association as the representative for graduating students and as a member of the Representation Committee, contributing to the advocacy and support of student interests and needs

PROJECTS

Mobideal.ca

- Phone pricing comparator across the three major canadian retailers (Best Buy, Costco Mobile, Walmart Wireless). The architecture is composed from an Oracle Autonomous Database, a Python script running on an Oracle Cloud VM scraping the API of the major retailers every 8 hours to update the database. The frontend is built on React and access the Oracle DB via it's own API.

ResumeTurbo.com

- A dynamic online resume generator, Implemented SwiftLaTeX, a WebAssembly LaTeX Compiler, for real-time in-browser LaTeX rendering, and Mozilla's PDF.js for cross-platform PDF viewing capabilities.

SimoHakim.com + Generator

- Python tool to generate portfolio websites based on a single JSON file. An example is SimoHakim.com, my own personal website.

Pairings.cloud

- Webapp for ranking and pairing players in large Swiss-system tournaments. The Participants website was built with React, while the Tournament Organizer companion app was developed using Electron, leveraging Firebase as database.

ASCII Sign Language Classification & Classification of Extreme Weather Events (Kaggle)

- Achieved 1st place in a Kaggle competition focused on classifying sign language images, utilizing Random Forest and Convolutional Neural Networks (CNN), with XGBoost
- Developed models for the detection and classification of extreme weather events from climate data, employing techniques such as Logistic Regression, Linear SVM, and XGBoost.

Solar Flare Detection via Radio Blackouts Phenomenon

- Currently building an ML model to locally detect solar flares in real-time by monitoring radio frequencies (5-25 MHz) via RTL-SDR.

AbraCarta - Shopify App

- Shopify-integrated platform that empowers card shop owners to manage live inventory, automate updates, and display pricing directly in their storefronts.
- rchitected a .NET backend with a modern React/Remix frontend; utilized RESTful APIs for internal operations and GraphQL for seamless Shopify integration.
